This text is disseminated via the Open Education Resource (OER) LibreTexts Project (<https://LibreTexts.org>) and like the thousands of other texts available within this powerful platform, it is freely available for reading, printing, and "consuming."

The LibreTexts mission is to bring together students, faculty, and scholars in a collaborative effort to provide an accessible, and comprehensive platform that empowers our community to develop, curate, adapt, and adopt openly licensed resources and technologies; through these efforts we can reduce the financial burden born from traditional educational resource costs, ensuring education is more accessible for students and communities worldwide.

Most, but not all, pages in the library have licenses that may allow individuals to make changes, save, and print this book. Carefully consult the applicable license(s) before pursuing such effects. Instructors can adopt existing LibreTexts texts or Remix them to quickly build course-specific resources to meet the needs of their students. Unlike traditional textbooks, LibreTexts' web based origins allow powerful integration of advanced features and new technologies to support learning.

LibreTexts is the adaptable, user-friendly non-profit open education resource platform that educators trust for creating, customizing, and sharing accessible, interactive textbooks, adaptive homework, and ancillary materials. We collaborate with individuals and organizations to champion open education initiatives, support institutional publishing programs, drive curriculum development projects, and more.

The LibreTexts libraries are Powered by [NICE CXone Expert](#) and was supported by the Department of Education Open Textbook Pilot Project, the California Education Learning Lab, the UC Davis Office of the Provost, the UC Davis Library, the California State University Affordable Learning Solutions Program, and Merlot. This material is based upon work supported by the National Science Foundation under Grant No. 1246120, 1525057, and 1413739.

Any opinions, findings, and conclusions or recommendations expressed in this material are those of the author(s) and do not necessarily reflect the views of the National Science Foundation nor the US Department of Education.

Have questions or comments? For information about adoptions or adaptations contact info@LibreTexts.org or visit our main website at <https://LibreTexts.org>.

TABLE OF CONTENTS

Licensing

1: Introductory Remarks

- 1.1: Introduction
- 1.2: Caloric, Calories, Heat and Energy
- 1.3: Extensive and Intensive Quantities
- 1.4: Mole
- 1.5: Prepositions
- 1.6: Applicability of Equations

2: Partial Derivatives

- 2.1: Introduction
- 2.2: Partial Derivatives
- 2.3: Implicit Differentiation
- 2.4: Product of Three Partial Derivatives
- 2.5: Second Derivatives and Exact Differentials
- 2.6: Euler's Theorem for Homogeneous Functions
- 2.7: Undetermined Multipliers
- 2.8: Dee and Delta

3: Temperature

- 3.1: Zeroth Law of Thermodynamics
- 3.2: Temperature Scales I
- 3.3: Temperature Scales II

4: Thermal Conduction

- 4.1: Error Function
- 4.2: Introduction
- 4.3: Thermal Conductivity
- 4.4: The Heat Conduction Equation
- 4.5: A Solution of the Heat Conduction Equation

5: Thermodynamic Processes

6: Properties of Gases

- 6.1: The Ideal Gas Equation
- 6.2: Real Gases
- 6.3: Van der Waals and Other Gases
- 6.4: Gas, Vapour, Liquid and Solid
- 6.5: Kinetic Theory of Gases- Pressure
- 6.6: Collisions
- 6.7: Distribution of Speeds
- 6.8: Forces Between Molecules

7: The First and Second Laws of Thermodynamics

- 7.1: The First Law of Thermodynamics, and Internal Energy
- 7.2: Work
- 7.3: Entropy
- 7.4: The Second Law of Thermodynamics

8: Heat Capacity, and the Expansion of Gases

- 8.1: Heat Capacity
- 8.2: Ratio of the Heat Capacities of a Gas
- 8.3: Isothermal Expansion of an Ideal Gas
- 8.4: Reversible Adiabatic Expansion of an Ideal Gas
- 8.5: The Clément-Desormes Experiment
- 8.6: The Slopes of Isotherms and Adiabats
- 8.7: Scale Height in an Isothermal Atmosphere
- 8.8: Adiabatic Lapse Rate
- 8.9: Numerical Values of Specific and Molar Heat Capacities
- 8.10: Heat Capacities of Solids

9: Enthalpy

- 9.1: Enthalpy
- 9.2: Change of State
- 9.3: Latent Heat and Enthalpy

10: The Joule and Joule-Thomson Experiments

- 10.1: Introduction
- 10.2: The Joule Experiment
- 10.3: The Joule-Thomson Experiment
- 10.4: CP Minus CV
- 10.5: Blackbody Radiation

11: Heat Engines

- 11.1: Introduction
- 11.2: The Carnot Cycle
- 11.3: The Stirling Cycle
- 11.4: The Otto Cycle
- 11.5: The Diesel Cycle
- 11.6: The Rankine Cycle (Steam Engine)
- 11.7: A Useful Exercise
- 11.8: Heat Engines and Refrigerators
- 11.9: Entropy is a Function of State

12: Free Energy

- 12.1: Review of Internal Energy and Enthalpy
- 12.2: Free Energy
- 12.3: Helmholtz Free Energy
- 12.4: Gibbs Free Energy
- 12.5: Summary, the Maxwell Relations, and the Gibbs-Helmholtz Relations
- 12.6: The Joule and Joule-Thomson Coefficients
- 12.7: The Thermodynamic Functions for an Ideal Gas

- 12.8: The Thermodynamic Functions for Other Substances
- 12.9: Absolute Entropy
- 12.10: Charging a Battery
- 12.11: Surface Energy
- 12.12: Fugacity

13: Expansion, Compression and the TdS Equations

- 13.1: Coefficient of Expansion
- 13.2: Compression
- 13.3: Pressure and Temperature
- 13.4: The TdS Equations
- 13.5: Expansion, Compression and the TdS Equations
- 13.6: Young's Modulus
- 13.7: Rigidity Modulus (Shear Modulus)
- 13.8: Volume, Temperature and the Grüneisen Parameter

14: The Clausius-Clapeyron Equation

15: Adiabatic Demagnetization

- 15.1: Introduction
- 15.2: Adiabatic Decompression
- 15.3: Adiabatic Demagnetization
- 15.4: Entropy and Temperature

16: Nernst's Heat Theorem and the Third Law of Thermodynamics

- 16.1: Nernst's Heat Theorem
- 16.2: The Third Law of Thermodynamics

17: Chemical Thermodynamics

- 17.1: Equilibrium Constant
- 17.2: Heat of Reaction
- 17.3: The Gibbs Phase Rule
- 17.4: Chemical Potential
- 17.5: Partial and Mean Molar Quantities
- 17.6: The Gibbs-Duhem Relation
- 17.7: Chemical Potential, Pressure, Fugacity
- 17.8: Entropy of Mixing, and Gibbs' Paradox
- 17.9: Binary Alloys
- 17.10: Ternary Alloys

18: Experimental Measurements

- 18.1: Introduction
- 18.2: Thermal Conductivity
- 18.3: The Universal Gas Constant
- 18.4: Avogadro's Number and Boltzmann's Constant
- 18.5: Specific Heat Capacities of Solids and Liquids
- 18.6: Specific Heat Capacities of Gases
- 18.7: Latent Heat of Fusion
- 18.8: Coefficient of Expansion
